

The Hopper Under Grate Filter Installation Instructions

The [Taurus Under Grate Filter](#) fits securely underneath storm drain covers and protects stormwater systems from suspended solids, silt, trash, yard waste and oil sheens. The low-profile secure-connect system allows easy installation, and is street sweeper and vehicle friendly.

Step 1: Lift the grate using a grate hook or proper mechanical equipment.

Step 2: Slip the webbing over the ends of the grate one side at a time.

Step 3: Affix the corner webbing over each of the grate's four corners one at a time.

Step 4: Replace the grate.

Finally, make sure that all webbing is lying flat with no excess above the grate.
